

**BeuginGaray**

Beyond surface protection

COMPREHENSIVE  
SOLUTIONS IN  
SURFACE PROTECTION

# LINING

---

At **BeuginGaray**, we have consolidated our position in the market after more than 50 years of experience, developing technical solutions in protection against corrosion, abrasion and chemical attack.

The products and services we offer are designed, manufactured and lined according to our customer needs and supported by a quality assurance and comprehensive service.

We develop all types of rubbers, that before being put in service in each process, are submitted to strict control and experimentation measures.

Besides, our service extends to the global market, where we are present by means of local implantations or licensees, that offer the avant-garde technology of **BeuginGaray**, and that adapts to the precise particular needs.

In the end, we are an organization that offers a comprehensive, immediate and quality service for issues related to prevention of corrosion, abrasion and chemical attack.

# GUARANTEE OF A COMPLETE SERVICE

At **BeuginGaray**, we make available for our customers the services needed to respond the most diverse and demanding working conditions,

according to the needs and with the guarantee of a complete service, which can be divided into these types:

## ON SITE

- » Removal of existing lining with pneumatic/ electric tooling or with the help of a modern induction device.
- » Surface preparation by means of sanding, brushing or sand-blasting.
- » Application of linings.

## WORKSHOP

- » Removal of existing lining if needed.
- » Manufacturing of soft and hard rubber, by means of a calender and a transforming extruder.
- » Surface preparation by means of grit-blasting, in large blasting cabins.
- » Application of internal and/or external linings.
- » Painting.

## LABORATORY

- » In our integrated laboratory, we develop our own rubber formulations ensuring all the necessary regulatory controls.
- » Our laboratory is equipped with ovens, wear and resilience testers, a tensile testing machine and a specific area to perform chemical compatibility tests.

# TECHNOLOGIES

---

- Hard and soft rubber lining for abrasive and/or corrosive processes.
- Sprayable and laminated with reinforced polymers.
- Elastic anti-abrasive sprayables.
- Chemical industrial paving and concrete protection by means of:
  - Continuous and multi-layer paving.
  - Lining with anti-acid tiles.
- Plastic boiler works with PVC, fluoridated, etc...
- Turnkey projects of protected metallic boiler works.
- Design and development of applications with elastomers, moulding components, etc

# SECTORS

---

- Chemical and electrochemical industry.
- Fertilizer plants.
- Petrochemistry.
- Thermal and nuclear power plants.
- Water and effluents treatment.
- Desalination plants.
- Iron and steel industry.
- Gas and fluid treatment.
- Mineral treatment.
- Transport of dangerous goods.
- Paper mills.
- Naval and fishing sector.
- Food industry.
- Pharmaceutical industry.
- Metallic equipment manufacturers.
